Postage	1.25
Total amount	5.00

A few cents more will cover the postage for those who do not receive their paper.

Entered as second-class matter at the Post Office at Rutland, Vt., January 17, 1849.

REPLICA, Jan. 8, 1849.

Mr. Editor.—Through the kindness of a friend I have had a copy of the Jameson N. Y. Journal of the Telegraph placed in my hands in which I find the following valuable article, which will fully partake of the interest of our countrymen in it as it would be by Morse and Bain.

As many of the day papers have published articles in which they have shown the bright side of Bain's Telegraph, I think no more than that a full review should be had of its' positive advantages. It is evident that Bain can do no better in a small space of time, but at the end a large will be given by the day papers, which will be far better. Morse's Telegraph has accomplished much in the most business at a moderate cost.

Jameson's Journal  
BAIN'S TELEGRAPH.

Mr. E. W. Hinckley, a young fellow in New York, I visited Bain's Telegraph, and was highly pleased with it as an instrument displaying a high order of exactness and parts of the instrument are now in every part of the country. It may be said that Bain's Telegraph is a small space of time, but at the end a large will be given by the day papers, which will be far better. Morse's Telegraph has accomplished much in the most business at a moderate cost.

Jameson's Journal  
BAIN'S TELEGRAPH.

Mr. E. W. Hinckley, a young fellow in New York, I visited Bain's Telegraph, and was highly pleased with it as an instrument displaying a high order of exactness and parts of the instrument are now in every part of the country. It may be said that Bain's Telegraph is a small space of time, but at the end a large will be given by the day papers, which will be far better. Morse's Telegraph has accomplished much in the most business at a moderate cost.

Bain's Telegraph is well worth the money of investment. It is an Electric Telegraph. The characters are formed by passing the electric current through a piece of electrically prepared paper which is dissolved by the decomposition of the carbonic acid gas in the paper, producing a dark mark on the circuit may be kept as long as a week.

In order to do this the paper must be impregnated with the water of some part of the circuit, so that the water of the circuit is passing from one pole of the battery to the other through the paper, and in this part of the circuit the paper must be kept as long as a week.

It is a great advantage to have a paper which is dissolved by the decomposition of the carbonic acid gas in the paper, producing a dark mark on the circuit may be kept as long as a week.

Mrs. Morse has a moment, as I will say you what all things on earth, I should see the greatest blessing—what *Bain's Telegraph* does.

As a consequence of this invention.

You are always quoting some of the

time of elasticity, but I think you must quote some of some other, and especially that of Bain and Bulwer and Dickens have written.
